Energy Valve Temperature Sensor and Fitting

24 VAC Transformer

Line Volts

Notes:

- Meets cULus requirements without the need of an electrical ground connection.
- Actuators with appliance cables are numbered.
- Actuators may be connected in parallel. Power consumption and input impedance must be observed.
- Actuators may also be powered by 24 VDC.
- A 500 Ω resistor converts the 4 to 20 mA control signal to 2 to 10 VDC.
- Actuators with plenum rated cable do not have numbers on wires; use color codes instead.
