Designed for maximum efficiency in tight spaces, Belimo’s ZoneTight valve offering sets new design and performance standards for both pressure dependent and pressure independent zoning applications.

**ZoneTight Zone Valve (QCV)**
The ultra-compact QCV leads the way in Belimo’s new generation of room and zone solutions. Equipped with a space-saving 2-way or 3-way ball valve and an electronic rotary actuator, the QCV has an installation height of just 4.33 inches (110 mm), available NPT or Sweat, and offers a number of benefits over conventional pressure dependent control valves, including:

- Belimo ball valve design with zero leakage eliminates energy loss.
- Self-cleaning ball valve technology provides superior clog resistance.
- Low power consumption up to 95% less than conventional zone valves.
- Field adjustable Cv value to meet your design requirements.

**ZoneTight Pressure Independent Zone Valve (PIQCV)**
The PIQCV offers all the advantages of a Pressure Independent Characterized Control Valve (PICCV) but in an ultra compact configuration. The PIQCV combines a differential pressure regulator with a 2-way control valve to supply a specific flow for each degree of ball opening regardless of system pressure fluctuations. The valve performs the function of a balancing valve and control valve in one unit.

- Smallest pressure independent characterized ball valve in the market.
- Actuator runs at 0.3 W saving energy and transformer power.
- Flow is adjustable at the actuator and always perfectly balanced.
- Permits PIV installation in tight spaces.
Belimo ZoneTight Zone Valves

Features

Compact Design
When faced with limited available mounting space, the Belimo ZoneTight valve’s super-compact design helps maximize workable space and complements OEM valve compartment optimization.

Ball Valve Technology
Unlike short stroke globe valves with plug and seat design, the self-cleaning ball helps minimize energy losses caused by clogging (0% A to AB leakage) and eliminates seat leakage. The intuitive configuration also allows for bi-directional flow (QCV) unlike traditional paddle style zone valves. In addition, equal percentage flow characteristic provides superior part load coil performance.

Actuator with Patented Brushless DC Motor
The brushless DC motor’s power consumption when running is a mere 0.3W, 0.15W when holding, saving energy and transformer power. In addition to significantly reducing energy costs, this helps eliminate failures due to stalled motors and prolongs actuator life. It also allows for more units to be powered by a single transformer.

Snap Fit
The QCV and PIQCV easily connects to the actuator allowing operators and technicians to install valves quickly, easily, and without the use of tools. This helps simplify commissioning and reduces labor costs.

Field Adjustable Max Cv/Flow
QCVs and PIQCVs can be quickly and easily field adjusted to ensure that necessary design requirements are met and reduces inventory.

Stem Extension for Insulation
Unlike conventional zone valve actuators, which are normally covered by pipe insulation, the stem extension on QCVs and PIQCVs allows for easy actuator removal without damaging the surrounding insulation, helping simplify operation and maintenance activities.

*“X” models are customizable. Refer to page 6 for factory set clip position options.

## Ordering Example

1. Choose the valve actuator combination.
   - Z2050QS-J+CQB24-SR

2. Choose set-up required
   - Modulating Non Fail-Safe Models
     - L = Normally Open
     - R = Normally Closed
   - Fail-Safe Models
     - LL = Normally Open/Fail Open
     - LR = Normally Open/Fail Closed
     - RL = Normally Closed/Fail Open
     - RR = Normally Closed/Fail Closed
     - Refers to valve ports from inlet to outlet, per flow arrow.

3. Does order require tagging?
   - Tagging: Valves may be tagged per customer specification. ($12.00 charge per tag)
   - Example: AHU-1
   - Part number for tagging: 99981-00101

4. Does order require clip setting?
   - Clip Setting: Valves may be set per customer specification. (All clip settings excluding “N” [default by factory] and “No Clip” have a list price adder of $37)
   - Example: Clip Position 1
   - Part number for setting: CQX, CQXX

5. Complete Ordering Example: Z2050QS-J+CQB24-SR-L

Belimo ZoneTight Zone Valves
QCV Product Range

**Mode of Operation**
The ZoneTight Zone Valve (QCV) is operated by a rotary actuator. The actuators are controlled by a standard voltage for on/off control, a modulating signal, or a 3-point control system which moves the ball of the valve to the position dictated by the control system.

**Product Features**
The equal percentage characteristic of the flow is ensured by the design of the ball. This characteristic provides linear heating or cooling output from the coil improving energy efficiency and comfort.

**Actuator Specifications**
- **Control type**
  - -3 on/off, floating point
  - -SR modulating, 2-10 VDC
- **Manual override**
  - use actuator to turn valve stem
- **Electrical connection**
  - 3 ft. [1 m] cable with ½" conduit fitting screw terminals
- **Power consumption**
  - CQ.. 0.3 W running, 0.2 W holding
  - CQK.. 2.5 W running, 0.5 W holding
  - CQ..UP 1.0 W running, 0.7 W holding
- **Power supply**
  - 24 VAC/DC (100-240 VAC, UP)
- **Transformer sizing**
  - CQ.. 0.6 VA
  - CQK.. 5 VA
  - CQ..UP 2 VA

**Valve Specifications**
- **Service**

Belimo ZoneTight Zone Valves
PIQCV Product Range

Mode of Operation
The ZoneTight Pressure Independent Zone Valve (PIQCV) is a two-way valve which combines the functionality of a control valve and a pressure regulating valve, creating one precise product which is unaffected by pressure variations in a system.

Product Features
Provides constant flow regardless of pressure variations in the system. Simplified valve sizing and selection, no Cv calculations required.

Actuator Specifications
- Control type: 3 on/off, floating point
- Manual override: use actuator to turn valve stem
- Electrical connection: 3 ft. [1 m] cable with ½” conduit fitting screw terminals
- Power consumption:
  - CQ..: 0.3 W running, 0.2 W holding
  - CQK..: 2.5 W running, 0.5 W holding
  - CQ..UP: 1 W running, 0.7 W holding
- Power supply: 24V (110-240 VAC, UP)
- Transformer sizing:
  - CQ..: 0.6 VA
  - CQK..: 5 VA
  - CQ..UP: 2 VA

Valve Specifications
- Service: chilled or hot water, 60% glycol
- Flow characteristic: equal percentage
- Controllable flow range: 75°
- Sizes: ½”, ¾”
- End fitting: NPT female
- Materials:
  - Body: forged brass
  - Ball: stainless steel
  - Stem: stainless steel
  - Seats: Teflon® PTFE
  - O-rings: EPDM
  - Spring: stainless steel
- Media temp. range: 36°F to 212°F [2°C to 100°C]**
- Media temp. limit: 250°F [120°C]**
- Maximum allowable operating temperature: 212°F [100°C]**
- PT ports: 2
- Body pressure rating: 360 psi
- Close-off pressure: 200 psi
- Differential pressure (∆P) range: 5 to 50 psi
- Leakage: 0%
- Flow control tolerance: ±5%

*Specify upon ordering.
**If temperature exceeds 212°F [100°C] operating range due to a boiler control failure the valve will safely contain the hot water but manufacturer’s product warranty becomes invalid.

### FOOTNOTES
QCV Flow Pattern

QCV 2-way valves can be piped with flow entering and exiting either port.

For on/off control of coil flow the QCV 3-way valve is piped with supply entering the bottom part.

For a QCV 3-way switching application, pipe hot and cold supply water to either side ports and the appropriate seasonal supply water will exit the bottom port for regulation by another 2-way valve; typically installed in the return pipe.

PIQCV Flow Pattern

The PIQCV consists of a differential pressure regulator and a control valve. The control valve is throttled to match the flow command of the control signal. The differential pressure regulator holds the pressure drop across the ball of the valve. As system pressure changes, the differential pressure regulator moves in response to keep the flow stable. Pressure (P1) at the inlet PIQCV is high and pressure (P3) at the outlet is low. The differential pressure between (P1) and (P3) must be between 5-50 to achieve pressure independent flow. When differential pressure increases the regulator opening is decreased. When differential pressure decreases the regulator opening is increased. This allows for the constant pressure differential across the ball of the valve.
PIQCVs are recommended to be installed on the return side of the coil. This diagram represents a typical application. Consult engineering specification and drawings for project details. PT ports are recommended if not supplied on either side of the valve and the supply side of the heat transfer device to allow for pressure/flow measurement/calculation.
QCV/PIQCV Insulation & Orientation

Insulation should wrap the pipe and valve body but not the actuator. For chilled water applications use the stem extension kit accessory to raise the actuator above the valve body to provide space for insulation.

PIQCV’s should be installed with flow in the direction of the arrow on the valve body. If installed backwards, there could be damage to either the diaphragm or the regulator. The valve assembly can be installed in a vertical or horizontal arrangement as long as the actuator is positioned to avoid water from dripping on the actuator.
QCV/PIQCV Field-Set Flow Capacity Adjustment

Align the clip to the notch scale found on the underside of the actuator to the corresponding flow in the table below. For 3-point floating control signals adjust the controller runtime parameter to match the runtime of the final clip position. For analog 2-10 VDC control signals see adaption instructions.

For incremental notch settings refer to the flow graphs on page 25 or visit www.zonetight.com and put in your flow requirements to determine your notch position.

NPT Installation

ZoneTight valves are provided with ASME NPT female pipe treads for connection to threaded pipe.
Actuator Attachment for QCV/PIQCV

Attach the actuator to the valve body. Align the actuator guide pins to the valve bonnet openings and press down until a click is heard. To remove the actuator, grasp it with your hand and pull it away from the valve body.

Adaption for Proportional Actuators

For actuators with analog 2-10 VDC signal, after flow capacity adjustment has been field-set by moving the clip to a desired position, execute the adaption routine to scale the signal across the available travel. The actuator will travel first in one direction and stall, then will travel in the opposite direction and stall. Then it will travel to the commanded position of the control signal. When the actuator is powered for the first time the adaption routine will execute automatically. Execute the adaption function any time the clip position is changed. The adaption routine does not change the actuator speed, which is 75 seconds over 90 degree rotation.

For actuators with On/Off or Floating Control input there is no adaption function or button.

On/Off, Floating Point Actuators: CQB24-3, COBUP-3
On/Off Actuators: CQKB24, CQKB24-S
WARNING Live Electrical Components!

During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.

**APPLICATION NOTES**

† Meets cULus requirements without the need of an electrical ground connection

**INSTALLATION NOTES**

⚠ Provide overload protection and disconnect as required.

⚠ Actuators may be connected in parallel. Power consumption and input impedance must be observed.

⚠ Actuators may also be powered by 24 VDC.

⚠ Only connect common to neg. (-) leg of control circuits.

⚠ A 500 Ω (ZG-R01) converts the 4 to 20 mA control signal to 2 to 10 VDC.

⚠ Actuators with plenum rated cable do not have numbers on wires; use color codes instead.

† One built-in auxiliary switch (1x SPST), for end position indication, interlock control, fan startup, etc.

**Wiring Diagrams**
Belimo ZoneTight Zone Valves
Wiring Diagrams

**INSTALLATION NOTES**

- Actuators may be connected in parallel. Power consumption and input impedance must be observed.
- Actuators may also be powered by 24 VDC.
- Only connect common to neg. (-) leg of control circuits.
- A 500 Ω (ZG-R01) converts the 4 to 20 mA control signal to 2 to 10 VDC.
- Actuators with plenum rated cable do not have numbers on wires; use color codes instead.

**APPLICATION NOTES**

- Meets cULus requirements without the need of an electrical ground connection

**WARNING Live Electrical Components!**

During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.

PIQCV Flow Verification and Commissioning Overview without Flow Orifice Device

After the actuator travel limit clip has been correctly located to position 1-N (or removed) to match the maximum flow setting of the coil, the following procedures detail the flow verification and commissioning procedures for Pressure Independent Valves Quick Compact Valves (PIQCV). These procedures are not mandatory to ensure proper operation of PIQCV. PIQCVs are very different from pressure dependent control valves (standard control valves). Pressure variations in the system do not affect flow through the PIQCV. Additional flow regulating devices (e.g. circuit setters and automatic flow limiting devices) should not be used in conjunction with PIQCVs. This makes the Testing and Balancing (TAB) or commissioning process much different from standard control valves. PIQCVs offer numerous maximum design flow values in each valve body size. It is important to note that the valve will travel to 90 degrees only when there is no end stop.

External P/T ports allow for independent verification of proper PIQCV operation. Additionally, these ports allow for future comprehensive troubleshooting and diagnosis. For proper and accurate flow verification of the mechanical PIQCV, it is essential that the mechanical contractor install P/T port A.

- P/T port A (P1) are used for measuring pressure differential across the coil (used to measure water ΔP to equate to flow) or to measure water ΔT across the coil.
- P/T port P1 and P3 are used to measure ΔP across the PIQCV assembly. PIQCVs must have 5 – 50 psid (11.5 ft. – 115 ft. H2O) differential pressure within this range. Do not manually remove the actuator travel limit clip to fully open the valve to check for design flow or pressure. Valve shall be commanded to design flow position via analog or BMS (Building Management System) signal. The required operating differential pressure range is necessary to insure pressure independent operation of the PIQCV

Note: The flow setter (ZCQB-FL) can be used to adjust the flow if the BMS is not available during the commissioning process.

Mechanical PIQCV Pre-Flow Verification Checklist

- Verify that system is purged of air and filled to proper pressure.
- Verify that each PIQCV has the required operating differential pressure range across P/T ports P1 and P3 as shown in fig. A.
- Verify proper pump operation per manufacturer's specifications.
- Verify proper supply water temperature is available and is at design temperature.
- Proper air filter maintenance has been completed.
- Fan belts are in proper working order.
- Heat transfer devices (coils) are clean.
- Strainers are clean.
- All manual shutoff valves are open.
- All bypass valves are closed.
- No automatic or manual balancing valves exist. If they do exist, they must be set fully open and locked to not interfere with the pressure independency function of the PIQCV.

Note: The flow setter (ZCQB-FL) can be used to adjust the flow if the BMS is not available during the commissioning process.
Procedures without Flow Orifice Device

Procedure #1 (System Verification) – Total System Flow Method
Verification for PIQCV Cooling/Heating

1. Verify that the system is in proper working order. Depending on the valves used, check the items listed for PIQCV Pre-Flow Verification Checklists.

2. If diversity factor = 100%, command open all PIQCV’s via the BMS system. Systems with less than 100% diversity need to have a number of valves closed to match design diversity.

3. Ensure that pumps are either manually commanded to sufficient speed to provide proper differential pressure across all valves OR if pumps are under DDC pressure control ensure ∆P setpoint is sufficient to provide the above conditions.

- Verify total system flow in main return line is at system design flow rate using one of the following methods: Orifice, Venturi, Electronic flow meter, System-level Flow Device

1. Decrease the pump speed (or decrease ∆P setpoint if under control) until a measureable flow decrease occurs.

2. Increase pump speed (or increase ∆P setpoint if under control) slowly until design flow is reestablished. Make note of the resulting ∆P. This will be the maximum system ∆P operating setpoint.

Note: If total flow does not match design flow then troubleshooting must be done to determine cause. This may involve verifying flows at the terminal level.

Procedure #2 (Terminal Level Verification) – Air Delta T Method
Verification for PIQCV Cooling/Heating

1. Verify that the system is in proper working order. Depending on the valves used, check the items listed for PIQCV Pre-Flow Verification Checklists.

2. Ensure that water is at design temperature.

3. Ensure that terminal airflow is at design airflow rate (cfm).

4. Command open the PIQCV via analog or BMS control signal to maximum design flow position. (Do not manually open the PIQCV beyond the actuator travel limit clip position).

5. Reference approved engineering document containing design air temperature drop/rise for design conditions.

6. Measure coil inlet air temperature and coil discharge air temperature. Difference between coil inlet air reading (EAT) and coil discharge air reading (LAT) should equal to or exceed design air delta T as shown on the contract documents.

Procedure #3 (Terminal Level Verification) – Water Delta Method
Verification for PIQCV Cooling/Heating

1. Verify that the system is in proper working order. Depending on the valves used, check the items listed for PIQCV Pre-Flow Verification Checklists. Ensure that water is at design temperature.

2. Ensure that terminal airflow is at design flow rate (cfm) or water coil airflow is unencumbered.

3. Command open the PIQCV via analog or BMS control signal to maximum design flow position. (Do not manually open the PIQCV beyond the actuator travel limit clip position.)

4. Reference approved engineering document containing design water temperature drop/rise for design conditions.

5. Measure water temperature differential of coil by using P/T ports A and B (or A and P1) as referenced in Fig. A.

6. Measured temperature differential should be equal to designed water temperature differential (EWT, LWT) as shown on the contract documents.

Procedure #4 (Terminal Level Verification) – Coil ∆P (Delta P) Method
Verification for PIQCV Cooling/Heating

1. Verify that the system is in proper working order. Depending on the valves used, check the items listed for PIQCV Pre-Flow Verification Checklists.

2. Command open the PIQCV via analog or BMS control signal to maximum design flow position. (Do not manually open the PIQCV beyond the actuator travel limit clip position.)

3. Ensure ∆P across valve assembly between P/T ports B and C (or P1 and P3) as shown above in Fig. A is within manufacturer’s operating parameters.

4. Reference approved engineering document containing design coil water pressure drop (usually expressed in ft. of water) for design flow conditions. This value will be for the heating/cooling coil associated with corresponding PIQCV.

5. Measure coil ∆P by using P/T ports A and B (or A and P1) as referenced in Fig. A.

6. Formula to calculate flow is: Actual GPM = Design GPM x √(Measured Coil ∆P/Design Coil ∆P)

Note: Measured Coil ∆P and Design Coil ∆P must be expressed in the same engineering units (feet of water, inches of water, psi, etc.).
Flow Verification with Flow Orifice Device

- Belimo flow orifice device has two pressure ports for field ∆P measurement with a manometer gauge.
- Connect manometer high pressure line to flow orifice red PT port; connect low pressure line to green PT port. Follow gauge instructions to verify connections.
- Take ∆P reading in inches of water (w.c.) and transpose to the Flow Orifice line of the Flow Chart. From that point follow the corresponding chart line to the flow scale and determine the actual flow.
- Refer to field-set procedure section on page 14 to adjust flow capacity to meet project requirements.

**Temperature Correction Factor:**
- 155°F / 68°C = 1.01 x GPM
- 205°F / 96°C = 1.02 x GPM

**How to Determine Flow:**
1. Enter the chart with the ∆P (differential pressure) reading.
2. Go horizontally across to the size of the valve.
3. Go vertically up or down to read the GPM (flow).

Application
The QCV zone valves are suited for large commercial buildings where higher close-off and the ability to change flow is desired. Common applications include unit ventilators, fan coil units, VAV reheat coils, fin tube casing, radiant panels and duct coils. The valve fits in space restricted areas and can be assembled without the use of tools.

Valve Specifications
Service: chilled or hot water, 60% glycol
Flow characteristic: equal percentage (2-way), linear (3-way)
Controllable flow range: 75° (2-way), 90° (3-way)
Size: ½", ¾"
Type of end fitting: NPT female ends

Materials
- Body: forged brass
- Ball: chrome plated brass
- Stem: brass
- Seats: Teflon® PTFE
- O-rings: EPDM (lubricated)

Media temperature range: 21°F to 212°F [-6°C to 100°C]
Media temperature limit*: 250°F [120°C]
Max. allowable operating temp.: 212°F [100°C]
Body pressure rating: 360 psi
Close-off pressure: 75 psi
Maximum differential pressure (∆P): 40 psi
Leakage: 0%

*If temperature exceeds 212°F [100°C] operating range due to a boiler control failure the valve will safely contain the hot water but manufacturers product warranty becomes invalid.

Operation
The ZoneTight Zone Valves (QCV, PIQCV) are operated by rotary actuators. The actuators are controlled by a standard voltage for on/off control, proportional signal, or 3-point control system which move the ball of the valve to the position dictated by the control system.

Terms and Conditions of Sale and Warranty

I. General

1.1. The following Terms and Conditions of Sale and Warranty (“Terms”) apply to the sale of products described in this Product Guide and products sold by Seller as an original equipment manufacturer (“OEM”) which may not be included in this Product Guide (“Product” or “Products”). As used herein, “Seller” or “Belimo” refers to Belimo Aircontrols (USA), Inc., or Belimo Aircontrols (CAN), Inc., or Belimo Automation AG, or Belimo Brasil – Comércio de Automação Ltda. as applicable, and “Client” refers to the individual or business entity that purchases the Products directly from Seller. These Terms shall apply unless the Seller and Client mutually agree to different terms and memorialize such agreement in writing signed by both Client and Seller or (ii) unless Seller changes these Terms and publishes the Terms on its Website to be found at: www.belimo.us, in which case the most recent Terms published on the Website will prevail. In case Seller's delivery includes software and/or application software and accompanying documentation, the terms of the license agreement for such software and/or application software are applicable in addition to these Terms. However, in case of conflicts between the terms and conditions of the license agreement and the Terms, the terms and conditions of the license agreement shall prevail.

II. Price

2.1. The Seller’s price for Products (the “Price”) is net, F.O.B. Point of Origin, and is calculated in US currency for sales made by Belimo Aircontrols (USA), Inc., and calculated in Canadian currency for sales made by Belimo Aircontrols (CAN) Inc., and Brazilian currency for sales made by Belimo Automation AG or Belimo Brasil – Comércio de Automação Ltda. to Clients in Brazil.

2.2. The Price, unless otherwise agreed upon, does not include freight and packaging (wooden crates, pallets, etc.), the costs of which will be charged to Client at cost for each shipment and shall be payable with payment of the Price.

2.3. Orders for Products where the total order has a net value of less than US $300 (CAN $300) will be subject to a US $20 (CAN $20) handling fee (the “Handling Fee”). The Handling Fee will not be charged for orders of Products with a net value equal to or greater than US $300 (CAN $300) or for Products ordered through Seller’s e-commerce ordering system at: www.belimo.com.

2.4. Seller reserves the right to make partial deliveries of orders of Products, each of which deliveries may be invoiced separately by Seller.

2.5. The Price does not include charges for wiring diagrams, installation, and commissioning, which will be charged to Client separately and will be payable on demand.

III. Payment

3.1. Invoices are payable in US currency for sales made by Belimo Aircontrols (USA), Inc., and in Canadian currency for sales made by Belimo Aircontrols (CAN) Inc., and in Brazilian currency for sales made by Belimo Automation AG on behalf of Brazil or Belimo Brasil – Comércio de Automação Ltda. Payments on invoices are due no later than 30 days from the date of invoice, without any deductions.

3.2. If Client maintains an outstanding balance for 45 days or more after the date of invoice, Client may be subject to restricted shipments of Products. A Client may also be required to pay for all future deliveries of Products on a cash-on-delivery or approved credit card only basis.

IV. Title and Risk

4.1. Title to Products will pass to Client from the Seller based upon the agreed Incoterms as stated on the Order Confirmation. The Seller retains the right to return the Products when payment is not received.

V. Damage or Loss in Transit

5.1. Seller assumes no liability for damage or loss of shipment of Products, which risk shall at all times remain with the carrier. All shipments must be unpacked and examined by Client immediately upon receipt. Any external evidence of loss or damage must be noted on the freight bill accompanying the shipment of Products or carrier’s receipt and signed by the carrier’s agent at the time of delivery. Failure to do so will result in the carrier’s refusal to honor any claim relating to damage of Products. Client must also notify Seller within 5 days of such damage by providing Seller with a copy of the freight bill or damage report so that Seller can file a claim for loss or damage in transit with the carrier. If the damage does not become apparent until the shipment is unpacked, Client must request a return by the carrier’s agent and file with the carrier within 15 days after receipt of product and notify Seller of the same.

VI. Delivery

6.1. Seller undertakes to make every attempt to adhere to its stated delivery parameters and to make a timely delivery of the Products but does not guarantee any delivery specifications. Each contract entered into for the purchase of Products is not cancelable nor is Seller liable for any direct or indirect losses that may arise, for any reason whatsoever, due to Seller’s failure to meet any stated or assumed delivery schedules.

VII. Inventory Overstock

7.1. If Client has an overstock of Product inventory, such Products received by Client cannot be returned unless and until: (i) Client alerts Seller that it intends to return some overstock of Products, (ii) Seller agrees to accept such return, (iii) Client obtains a Return Material Authorization (“RMA”) number from Seller for such return of such Products, and (iv) Client follows all return instructions provided by the Seller. The RMA number must be clearly written on the outside of all packaging for any returned overstock of Products.

7.2. Only such Products returned in original packaging and shipped to Seller at Client’s cost may be accepted for return under this Section. Client is also responsible for payment of a restocking charge for all returned overstocked Products in an amount no less than 20% of the invoice value of the Products (“Restocking Charges”). Any piping package or custom order returns carry a minimum restocking charge of 75% of the invoice value. Returns that result from Seller errors and not overstocking will be credited in full and will not be subject to Restocking Charges.

7.3. Any Product received damaged or showing evidence of having been installed will be refused or assessed a higher restocking charge. Custom kits designed to a Client’s unique specifications are not returnable.

7.4. If Client requests product to be returned to Client, the Client will be responsible for return shipping charges. See specific product literature for exclusions or exceptions.

7.5. Any Products that are retrofit are not returnable.

VIII. Handling, Installation and Use of Products

8.1. Products are only intended for installation and commissioning by trained technicians.

8.2. The installation and exchange of Products may only be carried out by trained technicians. Products may only be handled by trained technicians and only in accordance with the most current valid data and installation sheet.

IX. Limited Warranty

A. 5-year Limited Warranty

9.1. Products that are designated by Seller as carrying a 5-year warranty to a location in the United States, Canada, or Latin America shall carry a 5-year warranty. The 5-year warranty is unconditional for the first two years from the date of sale of the Products to Client, subject to the Limitation On Warranty in Section 9C. After the first two years from the date of sale, the warranty coverage shall not apply to damage to Products not resulting from normal wear and tear (e.g. negligence, misuse, or failure to maintain). Product specific terms of warranty with regard to warranty period or conditions of warranty may apply to certain specified Products as stated in the documentation for those Products.

B. 2-year Conditional Warranty

9.2. Products that are designated by Seller as carrying a 2-year warranty to a location in the United States, Canada, or Latin America shall carry a 2-year warranty. The 2-year warranty is conditional from the date of sale of the Products to Client, and the warranty coverage shall not apply to damage to Products not resulting from normal wear and tear (e.g. negligence, misuse, or failure to maintain). Product specific terms of warranty with regard to warranty period or conditions of warranty may apply to certain specified Products as stated in the documentation for those Products.

C. Limitation On Warranty; Warranty Disclaimer

9.3. Seller’s warranties hereunder shall be null and void in the event of any: (a) modification or unauthorized repairs of Products by Client; (b) unauthorized incorporation or integration of Products into or with Client’s equipment; (c) use of Products in an unauthorized manner; or (d) damage to Products not caused by Seller.

9.4. These Terms constitute the entire understanding and agreement between Seller and Client regarding the warranties that cover Products and supersede all previous understandings, agreements, communications and representations. All Seller warranties are extended only to Client and are non-transferrable. All Seller warranties shall extend only to HVAC use of the
9.14. Repaired or replacement Products are shipped from Seller via ground
shipping. Other shipping methods are available at the sole expense of the
Client.
9.15. Repaired, replaced or exchanged Products will carry a warranty for a
period of time equal to the greater of: (i) the remainder of the original 5-year
warranty or 2-year warranty that was applicable to the repaired, replaced or
exchanged Products, or (ii) six months, effective from the date the repaired,
replaced or exchanged Products are shipped by Seller (the “Replacement
Warranty Period”).
9.16. If Seller determines that Product under warranty is to be replaced, Seller
may elect to send a replacement in advance of receiving the returned item.
For valve products 2-1/2” in diameter or greater, a purchase order is required.
10.1. IN NO EVENT SHALL SELLER HAVE ANY LIABILITY TO CLIENT OR ANY
THIRD PARTY FOR ANY (a) LOST PROFITS OR COSTS OF PROCUREMENT OF
SUBSTITUTE GOODS OR SERVICES, OR FOR ANY INDIRECT, INCIDENTAL,
SPECIAL OR CONSEQUENTIAL DAMAGES, OR (b) ANY DAMAGES WHATSOEVER
RESULTING FROM THE PERFORMANCE OR A TEMPORARY OR PERMANENT
LOSS OF USE OF PRODUCTS, HOWEVER CAUSED INCLUDING NEGLIGENCE,
STATUTE OR OTHERWISE. THE FOREGOING LIMITATIONS SHALL APPLY EVEN IF
SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES AND
NOTWITHSTANDING THE FAILURE OF ESSENTIAL PURPOSE OF ANY LIMITED
REMEDY STATED HEREIN. SELLERS MAXIMUM AGGREGATE LIABILITY UNDER,
ARISING FROM OR IN CONNECTION WITH THE SALE OF ITS PRODUCTS TO
CLIENT, SHALL BE LIMITED TO THE AMOUNT PAID BY CLIENT FOR THE
PRODUCT DEEMED RESPONSIBLE FOR THE LOSS OR DAMAGE.
10.2. Client releases Seller in full from any possible third party claims
resulting in connection with the circumstances listed above. This also applies
to claims in connection with products liability.
10.3. If Client becomes aware that any third party has made or appears likely
to make any claim regarding Products (including, without limitation, regarding
Product defects or rights infringed by Products), then Client shall immediately
inform Seller and afford to Seller all assistance that Seller may require to
enforce its rights and defend such claim.
XI. Proper Law and Jurisdiction
11.1. All sales of Products under these Terms described herein shall be
governed by the laws of the State of Connecticut, without regard to its
conflicts of law principles, and Seller and Client agree to submit to the
exclusive jurisdiction of the federal and state courts located in the State of
Connecticut with respect to any dispute arising from the subject matter hereof.
The Seller and Client hereby waive all rights to a jury trial in connection
with any claims relating to the subject matter hereof. All causes of
action arising out of or connected to the sales of Products under these
Terms shall be resolved individually, with no right by Seller or Client to
participate in a representative capacity, or as a member of any class action.
XII. Privacy and Data
12.1 Seller places great value on the implementation of lawful data
processing to protect Client’s personal data. Seller is obliged to process
Client's personal data in accordance with applicable law. Seller is dependent
on the services of a third party for the provision of its services. Seller has
obligated the third party to process Client's data only in connection with the
services agreed with Seller, to ensure the same level of data protection as
Seller, and to not pass on Client's data to other third parties without Client's
consent. When processing Client’s data and transferring Client’s data to third
parties, Seller will use reasonable commercial efforts to provide an appropriate
level of data protection and that appropriate organizational and technical
measures are implemented to protect Client's personal data. More detailed
information on Seller’s data protection guidelines is available from the
following internet address: www.belimo.com/privacy.
XIII. California Proposition 65
13.1 WARNING: For Belimo Products sold in California, these Products do or
may contain chemicals which are known to the State of California to cause
cancer and or birth defects or other reproductive harms. For more information
see www.P65warnings.ca.gov.
